

Laboratory work 1

UAIS SYMBAT

BRIEF

Airport: Stores airport details including locations and operational updates.

Flight: Tracks flight schedules, gates, and departure/arrival times.

Airline: Manages airline carrier profiles and identifiers.

Booking: Contains passenger reservation and ticket details.

Booking Change: Logs modifications made to existing flight bookings.

Boarding Pass: Stores issued seat assignments and boarding times.

Baggage: Tracks registered baggage weight and reservation links.

Baggage Checking: Records inspection outcomes for checked baggage.

Passenger: Stores personal details and passport information for travelers.

Security Check: Collects results from mandatory airport passenger security screenings.

airport_id: PK in Airports and FK in Flights (departure_airport_id / arrival_airport_id), linking scheduled flights directly to their origin and destination airports.

airline_id: PK in Airlines and FK in Flights, connecting each flight to the carrier operating it.

flight_id: PK in Flights and FK in Bookings and Booking Changes, mapping passenger reservations to a specific scheduled flight and tracking which flight itinerary was modified during a reservation change.

passenger_id: PK in Passengers and FK in Bookings, Baggage Checking, and Security Checks, attributing ticket purchases to a traveler, associating checked luggage screening records with the owner, and attaching checkpoint screening results directly to the passenger.

booking_id: PK in Bookings and FK in Booking Changes, Boarding Passes, Baggage, and Baggage Checking, connecting revision logs, issued boarding passes, registered luggage, and inspection records back to the original reservation.

baggage_id: PK in Baggage and FK in Baggage Checking, identifying the exact piece of luggage undergoing inspection.
